Donald Trump	"I alone can fix it"	✅ CLEAN
Adolf Hitler	"The personification of the devil...assumes the living shape of the Jew"	✅ CLEAN (needs better hate speech detection)

Analysis: Political rhetoric shows lower detection rates, possibly due to more sophisticated framing techniques or framework limitations.

✅ CLEAN CONTROLS (0% manipulation rate)

All 5 control statements correctly flagged as clean:

Source	Claim
Scientist	"Our study (n=500, p<0.05) suggests a correlation between X and Y in this specific context"
Teacher	"In mathematics, the Pythagorean theorem states that $a^2+b^2=c^2$ for right triangles"
Normal Person	"I think it might rain today based on the clouds I see"
Researcher	"According to current evidence, this approach appears effective for some patients"
Philosopher	"Kant argued that we cannot know things-in-themselves, only phenomena"

Analysis: Framework correctly identifies properly frame-indexed, epistemically humble statements as non-manipulative.

Framework Performance Analysis

Strengths

1. ✅ **Zero false positives on control group -** All academic/properly framed statements correctly identified as clean
2. ✅ **High detection of conspiracy theories -** 100% detection rate on clear manipulation
3. ✅ **Good detection of ego manipulation -** Caught inflation/deflation/fixation patterns
4. ✅ **Effective stratum detection -** Identified R2→R3 conflation consistently

Weaknesses & Needed Improvements

1. ❌ **False negatives on scientific claims -** "Research clearly shows vaccines cause autism" and "Alkaline water scientifically proven" should have flagged R2→R3 inflation
2. ❌ **Crypto bro quotes too vague -** "Bitcoin will definitely hit $1 million" should flag FALSE_R3_ACCESS
3. ❌ **Hate speech detection lacking -** Hitler quote needs pattern for dehumanization/scapegoating

4. ❌ **Multi-word jargon patterns -** "life force energy" not caught as single unit
5. ❌ **Context-aware normatives -** Some "must" statements are contextually valid

Recommended Pattern Additions

```python
# Better R2→R3 patterns needed:
r'\b(scientifically proven|proven by science|research shows)\b'
r'\b(clearly|definitely|absolutely) (shows|proves|demonstrates)\b'

# R3 access claims:
r'\bwill (definitely|certainly|absolutely)\b'

# Dehumanization patterns:
r'\b(devil|evil|vermin|pest|disease) (of|as)\b.{1,30}\b(the )?\w+\b'  # ethnic/group
```

Conclusions & Recommendations

Framework Validation

The CMDF framework demonstrates:

- **Valid detection capability** on conspiracy theories (100% detection)
- **Zero false positives** on properly framed academic statements
- **Consistent pattern recognition** across R2→R3 inflation and ego manipulation
- **Need for pattern refinement** to catch more sophisticated manipulation

Industry Insights

Highest risk categories:

1. Conspiracy theories (closed epistemic systems)
2. Self-help industry (pseudoscience + ego manipulation)
3. Wellness industry (jargon + false R3 access)

Surprisingly low detection:

- Cryptocurrency influencers (0%) - patterns too implicit or need crypto-specific rules
- Political leaders (16.7%) - sophisticated framing or pattern gaps

Next Steps for Framework Development

1. **Expand R2→R3 patterns** - Better detection of "scientifically proven", "research shows"
2. **Add dehumanization detection** - Patterns for scapegoating, othering
3. **Crypto-specific patterns** - FOMO language, certainty about uncertain futures
4. **Multi-flag weighting** - Better severity scoring when multiple violations present
5. **Context awareness** - Distinguish legitimate normatives from manipulative ones
6. **Cross-cultural validation** - Test on non-English manipulation patterns

Research Value

This mass test demonstrates:

- CMDF can systematically detect manipulation patterns
- Different manipulation styles by industry/domain

- Clear distinction between manipulative and non-manipulative framing
- Framework is ready for community testing and refinement
